-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2837

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

1. Claim 5 is rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 55 of U.S. Patent No. 6781335.

Although the conflicting claims are not identical, they are not patentably distinct from each other because subject matter of claim 5 is in claim 55 of patent 6781335.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Popat as cited by applicant in view of Alderman as cited by applicant and Taichi (jp200125849) as cited by applicant and Zhang and Shiue et al .

Popat discloses power supply and electrical operated architectural covering device including voltage or current source having varying voltage output see fig 2A #31 and

Art Unit: 2837

electrical device fig 2A #33 and fig 8A and abstract. Popat lacks disclosing voltage converting unit including step up converter, coupling voltage or current source to electrical device and second circuit connecting motor to rechargeable power sour is step up converter and varying types of batteries and step up converter elements. Alderman discloses solar cell and battery coupled with voltage multiplier for boosted voltage see fig 1 #14,16,18 and abstract. Taichi discloses batter to load is coupled with boosted voltage see abstract. Zhang discloses shotky diode and mosfet for step up converter see paragraph (0013) and Shiue et al discloses battery types see claim 5. It would have been obvious to one of ordinary skill in the art to combine the power supply and architectural covering of Popat with boosted voltage of Alderman and boosted voltage of Taichi for recharging battery and for improved control and types of battery and step up converter elements for current demand and for different levels of power.
